

Design your own super plankton!

Here are some examples of the different types of plankton and their different forms. Some features help them to do certain things (functions), so you can design your own plankton using the features below to let it do anything you want!

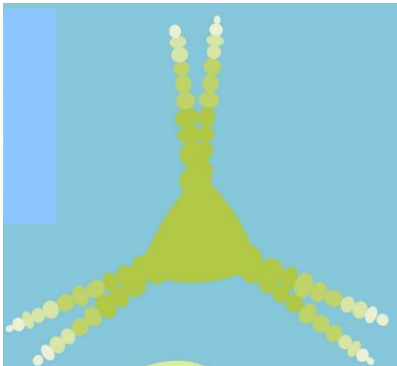

Spikes

To defend against predators.

Form colonies

To band together to make more food and increase protection from predators.

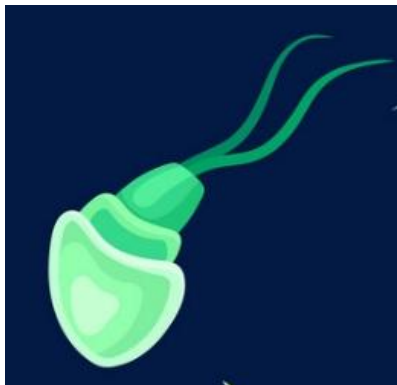

Spines

To stop them from sinking in the ocean by increasing their surface area.

Bioluminescent chemicals

These chemicals glow in the dark in response to movement, to surprise a predator to stop it attacking.

Tails

To help them swim in the ocean.

Scales made of chalk

To provide protection from predators and allow them to float like a buoyancy aid.
